

Creating True/False Questions

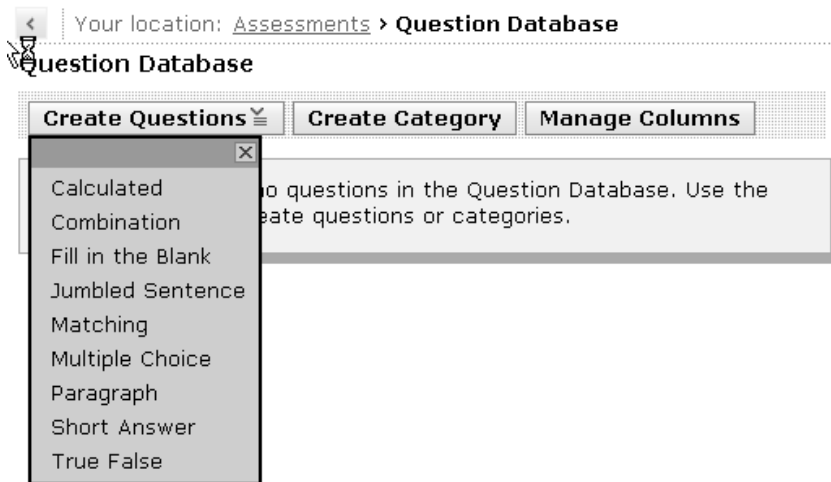

True/False questions present students with a question with only two possible answers — True or False. True/False questions are very useful to assess students' conceptual knowledge in a fun and quick way. They are helpful assessment tools to facilitate students' comprehension of their learning materials.

Creating True/False Questions

Make sure you are on the Build tab and select **Assessments** under Course Tools. Then choose **Go To Question Database**.

On the Question Database screen, select **Create Questions** to open the drop-down menu and then select **True False**. The Create True False Question screen will appear.

There are several areas that must be filled in when creating this type of question. The following are the descriptions for these areas.

Title

In the Title textbox, enter a descriptive title for the question. Question titles should be descriptive so you can easily identify questions when searching the Question Database. When students view assessments, question titles may or may not show depending on the assessment settings. Generally, the title is descriptive of the answer; therefore, the title is usually not displayed.

Create True False Question

* Title:

Question Text

In the Question textbox, enter the question. For each word or phrase you want students to enter, enclose the text in square brackets. You can have as many sets of brackets as you want. You can also include as many words within the brackets; however, be warned that if there is more than one word it will be harder for eLearning Vista to grade the question.

If you want to use HTML coding but do not know the tags, you can use the HTML Creator by clicking **On**. If you want to use HTML coding, either through the creator or your own coding, make sure the Use HTML checkbox is clicked.

You can also insert an equation by using the Equation Editor. The equation will be inserted within the question. In addition, you can also add an image by clicking **Browse** next to Image. The image will be shown below the question text. If the image is not listed under the File Manger area, you will need to upload the image from your local computer first. This can be done in one step by clicking **Browse**.

Question text: HTML Creator On Off

The city of Sydney hosted the Olympics Games in the year 2000.

Use HTML Insert equation: New

Answers

Select whether the correct response to the question is either True or False. For example, in the following figure the correct response to the question is True. Therefore, if students choose True as a response, they will receive 100% of the question value.

Answer

Correct response: True / False

More Options

- You can provide students with general feedback instead of or in addition to specific answer feedback. For example, you can give a chapter and/or page number where answers can be found. If you want to use HTML coding, click the **Use HTML** checkbox. General feedback displays when students view their graded assessment, if you choose to release it to them.
- If you want to enter notes for all designers to use when grading the assessment, add the information in the Section Designer notes box. This will be displayed to students when they review their results, if you choose to release it to them.

 **More Options** (Expand this area to see more options.)

General feedback

Use HTML

Section Designer notes:

All questions that are created are automatically stored in the Question Database. Since the Question Database could contain many questions, it is a good strategy to organize questions into categories.

- To add questions to an existing category, select **Specify an existing category**, and from the drop-down list select the category. Note that Uncategorized Questions is the default category. If you do not specify a category, questions will be placed there automatically.
- To add questions to a new category, select **Create a category** and in the textbox enter a category name.

Category: Questions may be placed in categories in the Question Database, for organizational purposes.

Save

Preview

Cancel

Preview: If you prefer to preview the question to ensure it displays and grades correctly, click **Preview**. The Preview Question pop-up window appears and individual questions are displayed as they will appear in the student view. If you want to check the grading scheme and feedback, select True or False and click **Grade**. The question will be graded and the answers are displayed, including the score and any feedback.

Olympocs and Australia

True False

Grade

Close

Previewing the question allows you to check that everything is correct. Now you can save the question by clicking **Save**. If you added a new category, you will find that it has been added (for example, "Chapter 4 Geography," as shown in the following figure). You may need to open a category by clicking the plus (+) sign. Once a category is open, you can view a list of all questions that have been added (for example, "Olympocs and Australia," as shown in the following figure).

	Title 	Type
	 Chapter 4 Geography  (1)	Category
	 Olympocs and Australia 	True False

You can repeat the same procedure to create as many True/False questions as you wish.
